

Information and Cyber security (SD, CY, CE372) – Lab Project 1

False Warning about computer Virus

Submission date: July 8th, 2026.

Task 1: Find out the definitions for Virus, Worm, and spyware.

Task 2: Download and install one of the antivirus software:

- 1) an antivirus personal edition from <http://www.free-av.com/>
- 2) avast-2007 from <http://www.avast-2007.com/>

Task 3: Download and install one of the spyware software.

- 1) Spybot - Search & Destroy from Patrick Kolla
<http://www.spybot.info/en/index.html>
- 2) Spyware Doctor from http://www.pctools.com/spyware-doctor/?ref=google_ab

Task 4: Virus and Hoax E-mail Exercises:

- 1) Determine the threat is a hoax or not. Draft a message to your fellow workers advising them o the hoax, how to determine themselves if any future received messages are real or fake.
- 2) If it is a real threat, draft a threat advisory to your organization containing the following: identify yourself, present a warning, provide the information about where you learned about the threat, provide information about how the employees can avoid or protect against the threat, and provide a reference should the employees desire more information about the threat.

Task 5: Practical Implementation

1) Antivirus and Spyware Scans

- Perform a full system scan using the installed antivirus software.
- Perform a full system scan using the installed spyware software.
- Document any detected threats and actions taken to resolve them.

2) Network Security Measures

- Discuss the importance of keeping antivirus and spyware software updated.
- Propose a schedule for regular scans and updates.
- Evaluate the effectiveness of the installed security software in a real-world scenario.
